Group Name: Oboffil

Topic: MeTa Toolkit

Project Topic: Enhance MeTA and Metapy usability

Project Progress

Which tasks have been completed?

The environment test that can handle Metapy and the toolkits is done. Also, the code with the libraries need is complete. Other codes to import the libraries and install the different tools are completed as well.

2) Which tasks are pending?

I need to complete the documentation and create the tutorial video to guide the user to develop these libraries' in an anaconda environment.

3) Are you facing any challenges?

Yes, I haven't found a way to run the installation of anaconda and the environment in just one run, also creating the environment by code has some issues. I'm thinking of using the GUI to implement this step and install anaconda directly from their website and then use the code to install the different packages.
